Cloud Architect with 13 years of hands-on experience designing, building, and operating large-scale infrastructure across AWS, DevOps and SRE disciplines.

My work spans the full infrastructure lifecycle — from architecting resilient multi-region systems to building the automation pipelines and reliability frameworks that keep them running at scale.

What drives me today is the intersection of cloud engineering and AI — specifically, how LLMs, MLOps, and agentic systems are fundamentally changing the way we design, manage, and evolve infrastructure.

Experience

Nagarro | July-2021 to Present

AWS Cloud Architect | Korea Ecommerce | May 2025 to Present

- Architected and delivered scalable cloud solutions for Korea ecommerce business problem.
- Led complex infrastructure provisioning for multiple accounts and workspaces using Terraform Enterprise.
- Designed end-to-end landing zones and future-state architectures aligned with security, compliance and scalability.
- Led pipeline design for containerized applications across EKS using GitOps, ensuring 90% faster deployments.
- Implemented multi-account governance using AWS Organizations, Service Control Policies, AWS Config, GuardDuty, and Amazon Inspector to strengthen security posture.
- Established reliable traffic and DNS routing using CloudFront, ALB, and Route 53 for production-grade application delivery.
- Reduced AWS infrastructure costs by 25% by right-sizing EC2 instances, removing idle resources, and auto scaling using Karpenter.
- Defined and provisioned IAM baseline and SAML roles across AWS accounts, including least-privilege access models, trust policy patterns for cross account access, and policy standards to improve governance.
- Planned and implemented VPC CIDR allocation and subnetting strategy for scalable AWS network architecture, including public/private subnet design, route segmentation, and IP space management.
- Collaborated with engineering, security, and business teams to define architecture standards, migration approaches, and operational best practices.

AWS SRE | Amway Thailand | July-2021 to June 2025

- Provisioned infrastructure using CDK for e commerce applications.
- Took the lead in implementing CI/CD pipelines using AWS CodeBuild, CodePipeline, and GitHub Actions, reducing deployment time by 90%.
- Improved platform uptime to 99.95% by implementing autoscaling strategies with HPA.
- Implemented GitOps-based deployments using Helm and Argo CD.
- Strengthened workload security using Prisma Defender and OPA as policy-as-code.
- Delivered observability improvements using AWS CloudWatch, ELK, Grafana Agent, and Amazon Managed Prometheus to improve monitoring, alerting, and incident response.
- Supported deployment, upgrades, troubleshooting, and root-cause analysis in collaboration with cross-functional teams to maintain production reliability.
- Helped standardize operational runbooks and troubleshooting patterns to improve response time and documented all ADRs.
- Received the “The Brightest Mind” award for technical execution, innovation, and problem-solving.

Orange Business Services | Aug-2018 - July-2021 | Azure DevOps Engineer

- Devops architect for Thermax customer portal.
- Managed the automation through Azure Devops and Gitlab CI/CD.
- Deployed containerized applications in Azure Kubernetes Service.
- Built microservices with java Spring Boot and integrated them with databases.
- Implementation of Kafka connect cluster for intercommunication of microservices.

AON | Financial Well being | February 2018 - Aug 2018 | Senior Software Engineer

- Coordinate with the clients and internal stakeholders and understand business requirements to deliver user stories.
- Worked with Agile core processes and tools such as Jira and confluence.
- Performed unit testing and integration testing using JUnit and Mockito to improve code quality and reduce defects.
- Facilitated team by resolving critical bugs and operational support activities.
- Code review for peers, checking for their adherence to the acceptable conventions.

Tata Consultancy Services | March 2013 - Jan 2018 | Software Developer

- Build RESTful and SOAP APIs for seamless communication between systems.
- Write, test, and debug well-structured Java code and integrated front-end elements into the application.
- Used tools like Maven, Git, Jenkins, and logging/monitoring utilities to support builds and deployment.
- Worked on API development, troubleshooting, bug fixing, and performance tuning to improve application stability and response time.
- Execute unit tests using Jacoco to ensure code reliability. Writing technical documentation for feature roll outs.

Certifications

- Certified with AWS Certified AI Practitioner on 2nd March 2026.
- Certified Kubernetes Certified Application Developer on 14th July 2025.
- Recognized as AWS DevOps Engineer Professional on 17 March 2025
- Cleared Terraform Associate (003) Certification Exam in January 2025
- Recognized as AWS Solutions Architect Associate Certificate holder in July 2022.
- Recognized as Oracle Certified Expert, EE 6 Java Persistence API Developer on March 25,2017.
- Recognized as Oracle Certified Expert, Java SE 6 Programmer on October 24,2011.
- Recognized as OCWCD Web Component Developer Certification Exam on May 23rd, 2015.

Skill Set

- **AWS:** Well-Architected Framework, landing zones, DR strategies, multi-tenant design.
- **Compute:** EC2, Lambda, ECS, EKS, Fargate, Auto Scaling
Storage: S3, EBS, EFS, AWS Backup
Networking: VPC, Route 53, ALB/NLB, CloudFront, Transit Gateway, Direct Connect, VPN
Security: IAM, IAM Identity Center, KMS, Secrets Manager, WAF, Shield, GuardDuty, Security Hub, Inspector, ACM
Data/Analytics: RDS, Aurora, DynamoDB, OpenSearch, Athena, Glue, Kinesis
DevOps: CloudFormation, CDK, SAM, CodeBuild, CodeDeploy, CodePipeline, Code Artifact.
Management: CloudWatch, CloudTrail, AWS Config, Systems Manager, Organizations, Control Tower.
- **AI :** Claude, Cursor AI, MCP, RAG, MCP, strands agents using Bedrock agentcore.
- **Languages:** Python, Java, Typescript, NodeJS
- **Frameworks:** Spring Boot, Hibernate, CDK, Confluent Kafka
- **Databases:** JDBC, PL/SQL, oracle 10g, Postgres, DynamoDB, Amazon RDS
- **Automation Tools:** ArgoCD, Helm charts, Terraform, Ansible and bash scripting.

Academics

- Pursued B.Tech in Computer Science from CITM, Faridabad and secured 75.21%
- Secured 83% in XII and 89.33% in Xth
